One request in. Three carriers' illustrations back.

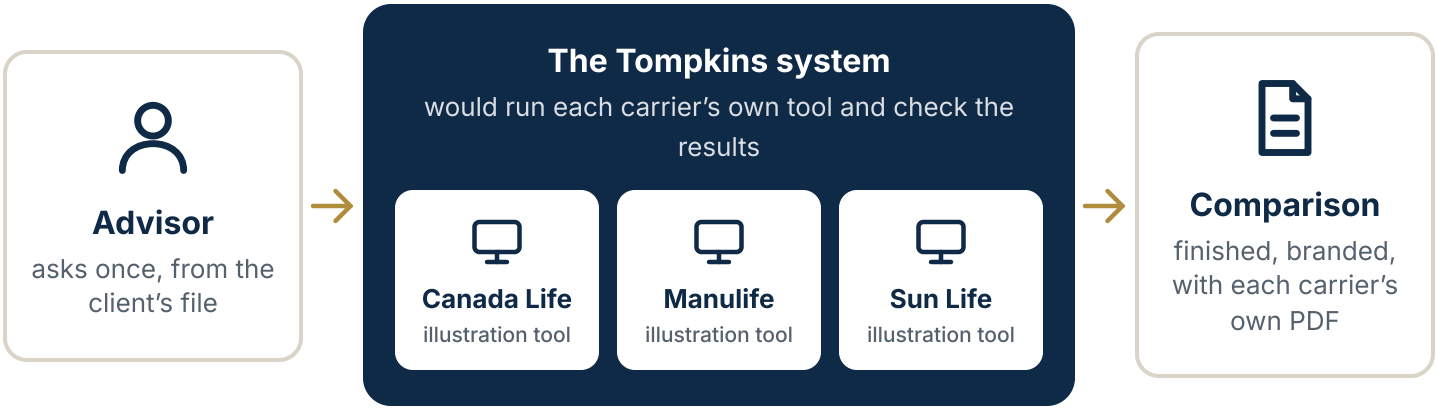

An illustration is the carrier's document showing what a policy costs and pays over time. This is a proposal for getting three of them from one request.

Where this stands today

Nothing is built yet, and nothing has been tested on any carrier's tool. The individual pieces are ordinary, proven technology. We do not yet know whether each carrier's tool can be run this way, how long it takes, or whether logins can be hands-off. Each carrier must give permission. Without it, staff run the tools and software builds the comparison.

THE BIG PICTURE

The advisor asks. The system would do the rest.

WHAT CHANGES FOR AN ADVISOR

Less typing, fewer logins, same carrier numbers

TODAY, AS WE UNDERSTAND IT

3	carrier tools to log in to
3×	the same client typed in
1	comparison built by hand

THE GOAL

1	request, from the client's file
0	times the client is retyped
1	finished comparison, delivered

Today's picture should be confirmed with advisors. A carrier may still ask a person for a login code.

STEP BY STEP

What would happen after the advisor clicks the button

1

The advisor asks ADVISOR

They open the client's file, pick the type of policy and enter the amount. The client's details are already there.

2

The request is entered the way each carrier asks for it SYSTEM

Every carrier's form asks for the same facts differently. A senior staff member writes down, one time, how each form should be filled in.

3

Each carrier's own tool produces the illustration SYSTEM + AI ASSISTANT

If the carrier permits it, the system would sign in and fill in the form the way a person would. The carrier does the calculating. If a carrier rearranges its website, Claude, an AI assistant made by Anthropic, would try to complete it. If it can't, a person does.

4

The system checks its own work SYSTEM

It would compare the key facts in each carrier's PDF with the request. Anything that does not match is set aside for a staff member.

5

The comparison is delivered SYSTEM, THEN ADVISOR REVIEWS

One Tompkins-branded comparison would arrive with each carrier's own PDF, and a copy goes to the client's file.

The numbers are the carriers'

By design, the system only copies carrier figures. It never calculates them.

People stay in charge

The advisor reviews everything before a client sees it.

Carriers must agree

Their rules generally don't allow automated use. Without permission, staff run the tools and software builds the comparison.

Draft proposal. Nothing on these pages has been built or tested yet.
