One request in. Every carrier's illustration back.

A fast, careful assistant that knows every carrier's software. The advisor asks once and gets a finished comparison.

THE BIG PICTURE

The advisor asks. The system does the rest.

WHAT CHANGES FOR AN ADVISOR

Less typing, no logins, same carrier numbers

TODAY

3	carrier tools to log in to
3×	the same client typed in
1	comparison built by hand

WITH THIS

1	request, from the client's record
0	logins and nothing retyped
1	finished comparison, delivered

STEP BY STEP

What happens after the advisor clicks the button

1

The advisor asks

ADVISOR · 1 MINUTE

They open the client, pick the type of case and enter the amount. The client's details are already there.

2

The request is put into each carrier's language

SYSTEM

Every carrier asks for the same facts differently. The system converts the request, using rules our best case designer sets once.

3

Each carrier's software produces the illustration

SYSTEM + CLAUDE

The system signs in and fills in each tool the way a person would. The carrier does the calculating. If a screen changes, Claude, our AI, finishes the job.

4

The system checks its own work

SYSTEM

It confirms each carrier document matches what was asked. Anything that does not match is held back for back office.

5

The comparison is delivered

SYSTEM, THEN ADVISOR REVIEWS

One Tompkins-branded comparison arrives with the three carrier originals, and a copy goes to the client's file.

The numbers are the carriers'

The system never works out a client figure itself.

People stay in charge

The advisor reviews everything before a client sees it.

Carriers must agree

Each carrier's permission is needed before launch.

Times are targets. This is a proposal and has not yet been tested against the carrier tools.
